

Project Design Phase

Problem – Solution Fit Template

Date	01 October 2026
Team ID	SWTID-2026-6491
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

1. Customer Segment(s)	Administrators and data-entry staff of schools, colleges or companies who keep student/employee data in spreadsheets.
2. Problems / Pains	Manual entry of many records is slow and causes mistakes and duplicates; no quick report of the data.
3. Triggers to Act	New batch of student data arrives (new admission, new semester) and must be in ServiceNow quickly.
4. Emotions: Before / After	Before: frustrated, afraid of errors. After: relieved and confident – Transform History shows 5 inserts and 0 errors.
5. Available Solutions	Typing records manually; using each record form one by one. Limitation: slow, error-prone, no bulk upload.
6. Customer Constraints	Limited time, little coding knowledge, spreadsheet columns may not match table fields.
7. Behaviour	Keeps data in Excel files, shares them by email or drive, copies values into forms by hand.
8. Channels of Behaviour	Online: ServiceNow web UI, Excel/Drive. Offline: printed lists and spreadsheets on local computers.

9. Root Cause of Problem	Spreadsheet data is not connected to a ServiceNow table, and no Transform Map exists to map the fields.
10. Our Solution	Load the spreadsheet into an Import Set, map fields with a Transform Map, run it to insert records into the Student Information table, then view a pie-chart report and dashboard.
