

Project Design Phase Proposed Solution Template

Date	01 October 2026
Team ID	SWTID-2026-6491
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Student/employee data is maintained in spreadsheets and entering it into ServiceNow record by record is slow, error-prone and leads to duplicate or inconsistent records. There is no quick way to bulk-load spreadsheet data and see it as reports.
2.	Idea / Solution description	Use ServiceNow Import Sets and a Transform Map to import spreadsheet data automatically. A custom table "Student Information" is created; the .xlsx file is loaded into the import set table u_student_import; the Transform Map "Student Information" maps Student ID, Student Name, Department, Email and Year to the target table; the run inserts all records. A pie-chart report and a dashboard then summarise the data.
3.	Novelty / Uniqueness	No-code/low-code bulk import using a reusable Transform Map with field-level mapping, built-in transform history (inserts, updates, ignored, skipped, errors) and instant reporting/dashboard on the imported data – no scripting or manual data entry required.
4.	Social Impact / Customer Satisfaction	Saves administrators' time, improves data accuracy and gives institutions quick access to up-to-date student information for decisions. Reduces manual errors and increases user satisfaction.
5.	Business Model (Revenue Model)	Offered as an implementation/consulting service for schools, colleges and companies using ServiceNow (one-time setup fee), with optional subscription-based support for scheduled imports and dashboards. The import feature itself is part of the ServiceNow platform licence.
6.	Scalability of the Solution	The same Transform Map approach scales from 5 records to thousands: additional columns, departments or tables can be added, imports can be scheduled, and the solution can be extended to

		other data sources such as CSV, JDBC or REST.
