| Team ID       | SWTID-2026-6491                                |
| Project Name  | Import Data using Transform Maps (Spreadsheet) |
| Maximum Marks |                                                |

### Model Performance Testing:

Project team shall fill the following information in model performance testing template.

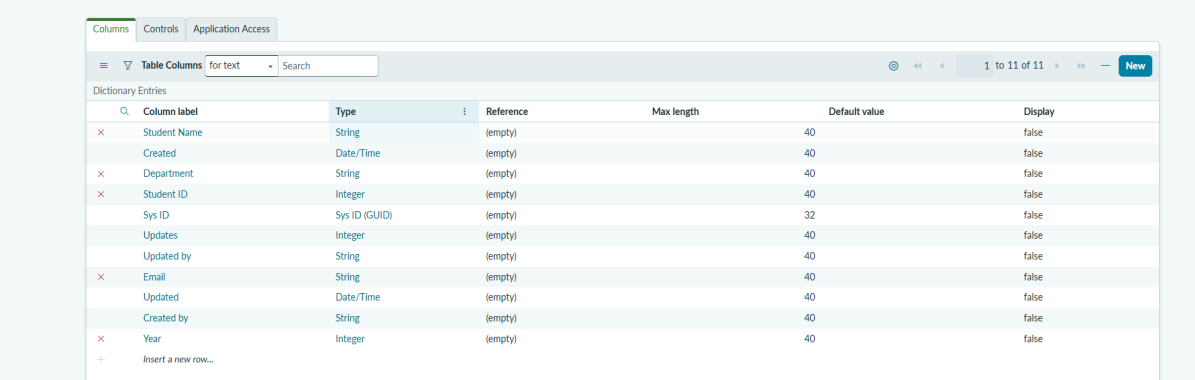

| S.No. | Parameter                             | Values                                                                                                                                                                                                                                                                                                                                                                                                                                         | Screenshot                                                                            |
|-------|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 1.    | <b>Model Summary</b>                  | <p>ServiceNow data-import automation for student records: a spreadsheet (.xlsx) with 5 records (Student ID, Student Name, Department, Email, Year) is loaded into the import set table u_student_import and moved to the target table u_student_information using the Transform Map "Student Information".</p> <p>Note: If the source fields match the target fields correctly, records are created; otherwise the transform shows errors.</p> |    |
| 2.    | <b>Table Structure (Target Table)</b> | <p>Custom table "Student Information" [u_student_information] created with columns: Student ID (Integer), Student Name (String), Department (String), Email (String), Year (Integer), plus system fields (Sys ID, Created, Created by, Updated, Updated by, Updates).</p>                                                                                                                                                                      |  |
| 3.    | <b>Import Result (Accuracy)</b>       | <p>Transform state: Complete<br/> Total: 5   Inserts: 5   Updates: 0   Ignored: 0   Skipped: 0   Errors: 0<br/> Import success rate: 100% (5 of 5 records inserted)<br/> Run time: 1 second</p>                                                                                                                                                                                                                                                |  |

|    |                  |                                                                                                                                                                                                |                                                                                     |
|----|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 4. | <b>Report</b>    | Report "Student Information" on table u_student_information, type Pie chart, Group by: Email, Aggregation: Count. Result: 5 slices of 20% each, confirming all 5 unique records were imported. |  |
| 5. | <b>Dashboard</b> | "Student Information Dashboard" with a single-score widget showing total records = 5 and a line chart of records by date (Sep 27).                                                             |  |
