

ServiceNow Data Import with Transform Maps

Project Documentation format

1. Introduction

- **Project Title:** Import Data using Transform Maps (Spreadsheet)
- **Team Members:** Gobinath – developer, tester and documentation

2. Project Overview

- **Purpose:** Import student records from a spreadsheet into ServiceNow automatically using an Import Set and a Transform Map, and present the data in a report and dashboard.
- **Features:** Custom table creation; spreadsheet upload; Transform Map field mapping; transform history with insert/error counts; pie-chart report; dashboard with score and line chart.

3. Architecture

- **Frontend:** ServiceNow Now Platform web UI (forms, lists, Report designer, Dashboards). The Excel file is uploaded from the browser.
- **Backend:** Import Set table u_student_import and the Transform Map "Student Information" run on the ServiceNow platform (no separate server code needed).
- **Database:** Table u_student_information with Student ID (Integer), Student Name (String), Department (String), Email (String) and Year (Integer) plus system fields.

4. Setup Instructions

- **Prerequisites:** ServiceNow instance (Personal Developer Instance) with admin access; Microsoft Excel (.xlsx file).
- **Installation:** 1) Prepare the spreadsheet. 2) Create the table Student Information. 3) Create a Data Source and load the file into u_student_import. 4) Create the Transform Map and field mappings. 5) Run the transform.

5. Folder Structure

- **Client / Server:** Not applicable – this is a no-code ServiceNow configuration.
Components: Table (u_student_information), Import Set table (u_student_import), Transform Map (Student Information), Report, Dashboard.

6. Running the Application

- **Run the import:** Open Transform Maps → Student Information → Transform, or run the import from Load Data. Check System Import Sets → Transform Histories for the result.

7. API Documentation

- **Endpoints:** No custom API is used. The built-in ServiceNow Table API could be used later to read u_student_information.

8. Authentication

- **Authentication:** Access is handled by ServiceNow user login and roles (admin role to import data); table Application Access and ACLs control who can read or write the records.

9. User Interface

10. Testing

- **Testing:** Functional checks of each step. Result: Transform State Complete, Total 5, Inserts 5, Updates 0, Ignored 0, Skipped 0, Errors 0, run time 1 second.

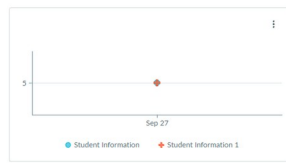

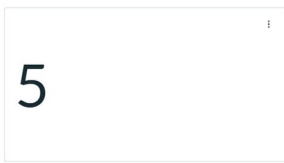

11. Screenshots or Demo

	A	B	C	D	E
1	Student_ID	Student_Name	Department	Email	Year
2	101	Thivin	AIDS	thivin@gr	3
3	102	Arun	CSE	arun@gm	2
4	103	Priya	ECE	priya@gm	3
5	104	Kumar	IT	kumar@g	2
6	105	Ravi	CSE	ravi@gma	3

Transform History – run results

Student Information Dashboard

12. Known Issues

- **Known Issues:** Only 5 sample records were imported, so large-file behaviour is not tested. The report groups by Email, so every record shows as a separate 20% slice.

13. Future Enhancements

- **Future Enhancements:** Scheduled imports, coalesce on Student ID to avoid duplicates, validation scripts for email format, more reports (by Department / Year) and email notification after each import.
